## **DETAILED ACTION**

## Response to Arguments

1. In response to the Applicant's argument's filed 5/16/2006, the Examiner respectfully agrees with the Applicant, regarding a distance between the first position and the second position is shorter than of the length of the base. The Examiner clearly stated that the distance between the first position and the second position (as shown in fig. 7 of US 6384811 B2 to Kung et al.) is not shorter than one half of the length of the base and that it would have been obvious to reposition the first and second positions, wherein a distance between the first position and the second position is shorter than of the length of the base. Repositioning the links would still provide support for the lid.

With respect to Applicant's argument, regarding a pair of links, the Examiner respectfully asserts that Landry is not relied upon to teach a pair of links, and notes that Kung is relied upon to teach a first link (40) and a second link (42).
